

COR/Mammo/Disc/01-2004

The College of Radiology Academy of Medicine of Malaysia (COR) recommends a disclaimer accompany each mammogram report as follows:

"The mammogram may miss up to 5-15% of cancers in the breast. The management of the patient should be based on clinical grounds."

Please note that this is just a recommendation in line with good clinical practice. Modifications to the statements may be necessary to suit the nature of each radiology practice.

As a routine all patients should be counseled on the benefits and limitations of the mammogram.
