

PAEDIATRIC RADIOLOGY WEBINAR

16th Dec, 2023
02:00pm – 06:00pm

Paediatric Radiology is a subspecialty which encompasses the whole aspects and being of an individual from fetal life, infant, and all through childhood into adulthood. In other words, it is a subspecialty which turns the trainee into a generalist. Being such a vast and diverse subspecialty, continuous education and training are needed. This year's webinar, we will focus on Paediatric CT Made Easy. We will discuss on the imaging techniques and protocols tailor made for each system. We have divided the webinar into 3 sessions: CT scan – the do's and the don'ts, the not so common and case sharing. We welcome all radiologists and radiology trainees to join our webinar to learn together and improve our knowledge on the scanning techniques in paediatric CT.

TIME	TOPICS	SPEAKER
