MASTERING BREAST IMAGING: INNOVATIONS AND INSIGHTS

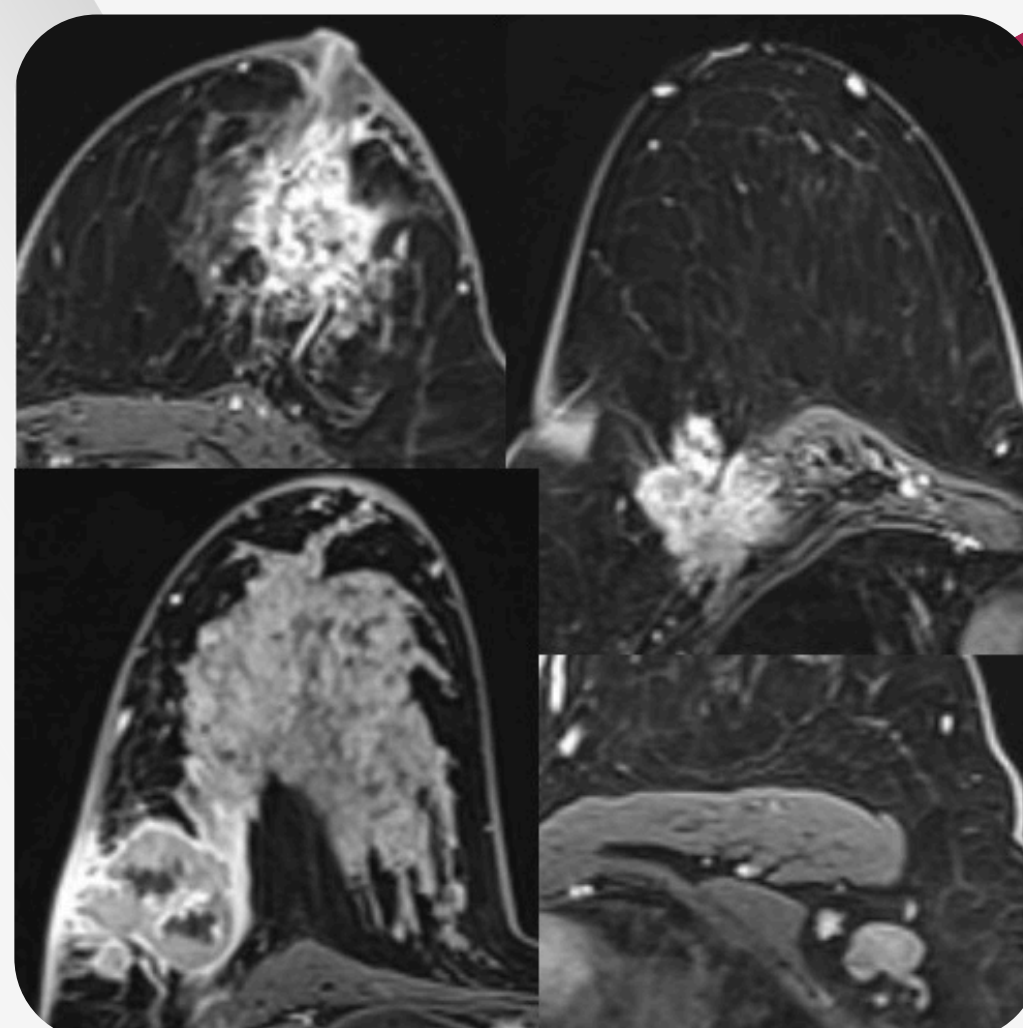

The objective of this half day seminar during the Pink October no less is to enhance the knowledge and update Radiologists with the recent advances and new technologies in the field of Breast Imaging. Imaging plays a pivotal role in clinical decision-making process, using various modalities. Every modality and interventional procedures have its strengths and weaknesses in screening, diagnosis, treatment and follow up of patients. It is essential that the clinicians are aware of these and know how these findings impact clinical decision. Based on objective information, using the multidisciplinary approach the radiologists can appropriately determine the modalities and interventional techniques that are most appropriate and cost effective for individual.
